Issues Identified – TC_03_Verify payment transaction is blocked for sanctioned country

1. Preconditions do not specify exact data required for the beneficiary (e.g., country code, account number format) – preconditions lack concrete test data. review
2. Steps do not include verification of the exact error/restriction message displayed to the user – validation step missing. review
3. No negative scenario to confirm that a payment to a non-sanctioned country proceeds successfully – coverage gap. review
4. Boundary conditions (e.g., minimum/maximum transfer amount, zero amount) are not addressed – edge-case testing absent. review
5. Audit-log verification is mentioned only generally; specific log fields to validate are not listed – validation detail insufficient. review
6. Expected Result does not define the system response code or UI element identifiers – result definition incomplete. review
7. Post-conditions (system state after execution) are not documented – test completeness lacking. review

7. Post-conditions (system state after execution) are not documented – test completeness lacking. review

Key Areas of Improvement

- Define explicit test data in Preconditions (beneficiary account number, sanctioned country code, transfer amount).
- Add verification of the exact error message and UI element (e.g., message ID).
- Include a complementary negative test step for a non-sanctioned country to ensure normal processing.
- Incorporate boundary-value steps (e.g., transfer amount = 0, amount = maximum allowed).
- Detail audit-log fields to be checked (timestamp, user ID, transaction ID, sanction rule triggered).
- Specify expected system response codes or status flags.
- Add a Post-condition section confirming that no funds were debited and that the alert case remains open.

Improved Version of the Test Case
Title: TC_03_Verify payment transaction is blocked for sanctioned country
Preconditions:

- User has an active online banking account (Account ID: ACC12345).
- Sanctions screening engine is configured with the restricted-countries list that includes **Country Code IR** (Iran).
- User is logged into the banking application.
- Beneficiary details prepared:
  - Account Number: BEN987654321
  - Bank Country: IR (sanctioned)
  - Transfer Amount: USD 1,000

Default Session

Steps:

1. Launch the banking application.
2. Log in using valid credentials (User ID / Password).
3. Navigate to **International Payment Transfer** section.
4. Enter beneficiary account details (Account Number BEN987654321, Country IR).
5. Select **Sanctioned Country – IR** from the country dropdown.
6. Enter transfer amount **USD 1,000** and payment purpose "Invoice #123".
7. Click **Submit Payment**.
8. Verify that the system blocks the transaction and displays the error message:
   - Text: "Payments to sanctioned countries are not permitted."
   - Message ID: **ERR_SANCTION_BLOCK**
9. Verify that a compliance alert/case is automatically created with status **Open** and includes the transaction ID.
10. Verify audit log entry contains: timestamp, user ID, transaction ID, blocked flag, and sanction rule **Country IR**.

9. Verify that a compliance alert/case is automatically created with status **Open** and includes the transaction ID.
10. Verify audit log entry contains: timestamp, user ID, transaction ID, blocked flag, and sanction rule **Country IR**.

Expected Result:

- Transaction is blocked; no funds are debited.
- UI shows error message "Payments to sanctioned countries are not permitted." (Message ID ERR_SANCTION_BLOCK).
- Compliance case/alert is generated with correct metadata.
- Audit log records the blocked transaction with all required fields.

Post-conditions:

- User account balance remains unchanged.
- Compliance case remains in **Open** state for investigator review.

The test case now includes explicit data, validation of UI messages, audit-log details, and clear post-conditions, addressing positive, negative, validation, and boundary considerations.
