    "reasoning": "We need to extract the DOM elements and provide Playwright TypeScript code to interact
        with them. The instruction: \"Do not use ID if the value has number in it.\" So for elements with
        IDs containing numbers, we should not use ID selectors. The IDs: createLeadForm_companyName (no
        number), createLeadForm_lastName (no number), createLeadForm_firstName (no number), ext-gen630
        (has number). So for the first three we can use ID selectors, but for the submit button we should
        not use ID because it has number. Use other selectors like text, class, type, value.\n\nProvide
        only TypeScript code, no explanations. Likely code to fill fields and click submit.\n\nWe'll write
        something like:\n\nimport { test, expect } from '@playwright/test';\n\ntest('create lead', async
        ({ page }) => {\n  await page.goto('URL'); // placeholder\n  await page.fill
        ('#createLeadForm_companyName', 'Acme Corp');\n  await page.fill('#createLeadForm_lastName',
        'Doe');\n  await page.fill('#createLeadForm_firstName', 'John');\n  await page.click('input
        [type=\"submit\"][value=\"Create Lead\"]');\n});\n\nBut we shouldn't use ID for submit. Use
        attribute selectors.\n\nProvide only code."
