

Resumes- RAG- Batch Ingestion

1. Add the resume folder containing the resume files to the existing workspace.
2. write a prompt to implement a batch ingestion workflow for resumes.
3. Configure the workflow to process resumes in batches of 5 or 10 files per run.
4. Validate the ingestion process by testing multiple batches and verifying that all resumes are successfully ingested.

npm run batch:ingest -- --batch-size 2 --once

Ran a small batch with 2 docs first – sample run

The screenshot shows a VS Code editor with a project named 'Resumes-AI-RAG - BATCH'. The Explorer sidebar on the left shows the file structure, including folders like '.claude', '.github', '.vscode', 'docs', 'ProcessedResumes', 'prompts', 'Resumes', 'src', 'UnprocessedResumes', and 'uploads'. The '.env' file is open in the editor, containing configuration for the application. The terminal at the bottom shows the command 'npm run batch:ingest -- --batch-size 2 --once' being executed, followed by a series of JSON logs indicating the batch ingestion process.

The bottom pane shows the output of a terminal command: 'PS C:\Resumes-AI-RAG - Batch> npm run batch:ingest -- --batch-size 30--once'. The terminal output displays a series of JSON logs indicating the ingestion of resumes, with some failures due to 'Mistral embedding failed' and 'Resume extraction failed - PDF appears to be empty'. The final log shows the batch ingestion is complete with 178 total files, 60 processed, 118 failed, and a duration of 60219 ms.
